Overview of On-Site Wastewater Treatment Systems Wastewater Treatment Systems

About ISI

Infiltrator Systems Inc. is the world's leading manufacturer of plastic leachfield drainage chambers for environment onsite wastewater solutions. Our chambers, a direct replacement for stone and pipe leachfields, have revolutionized the septic industry. They provide cost effective, efficient methods for handling residential and commercial wastewater.

ISI is the only chamber that both manufactures its own products and sells to its customers through national distribution. Our trained sales reps work in the field to provide product installation and technical support.

Our systems are approved in all 50 states, 45 states with up to a 50% smaller footprint. There are over one million systems installed and more than 27 million units in-ground in the U.S. and 13 other countries. Our systems have stood the test of time with a history of performance since 1987. Today, one in four septic systems in the U.S. is an Infiltrator chamber system.

Recommended Number Of Years Between Pumping of Septic Tanks According to Size Of Tank and Household Household Size (Number of People)

Tank Size (Gals.)	1	2	3	4	5	6	7	8	9	10
500	5.8	2.6	1.5	1.0	0.7	0.4	0.3	0.2	0.1	-
750	9.1	4.2	2.6	1.8	1.3	1.0	0.7	0.6	0.4	0.3
1000	12.4	5.9	3.7	2.6	2.0	1.5	1.2	1.0	0.8	0.7
1250		7.5	4.8	3.4	2.6	2.0	1.7	1.4	1.2	1.0
1500			5.9	4.2	3.3	2.6	2.1	1.8	1.5	1.3
1750				5.0	3.9	3.1	2.6	2.2	1.9	1.6
2000					4.5	3.7	3.1	2.6	2.2	2.0
2250						4.2	3.5	3.0	2.6	2.3
2500							4.0	4.0	3.0	2.6

If your home or business uses an on-site wastewater treatment system, commonly known as a septic system, you need to know how to operate and maintain the system properly to prevent pollution and sewage backups.

Different types of on-site wastewater treatment systems require different maintenance procedures. However, all systems need maintenance: Yours will fail if you do not maintain it.

These general tips can also help you keep your on-site wastewater treatment

system operating:

- **Do not treat an on-site wastewater treatment system as if it were a normal centralized sewer system. Items flushed down the toilet do not disappear. They must be treated by the on-site wastewater treatment system.**
- **Do not use in-sink garbage grinders excessively or discard too much grease. Garbage grinders can cause sludge or scum to build up rapidly, making it necessary to clean the septic systems more frequently and possibly causing it to fail because the wastewater is too strong for the system to handle.**
- **Do not use the toilet as a trash can. Do not dispose of cleaning tissues, cigarette butts, diapers or other trash in the toilet. This wastes water and loads too many solids on the treatment system.**
- **Have the septic tank cleaned before sludge accumulates almost to the bottom of the tank's outlet device. If sludge or scum accumulates to this point, solids will leave the tank with the liquid and possibly clog the soil in the drain field. Sewage will then surface or back up into the house through the plumbing fixtures.**
- **Because it is impractical for an average homeowner to inspect a septic tank to see if it needs to be cleaned, establish a regular schedule of cleaning the septic tank every 2 to 3 years. Septic tank pumpers are equipped to clean septic tanks. Only people registered with Texas Natural Resource Conservation may pump and transport septic tank sludge.**
- **Do not build driveways, storage buildings or other structures over the treatment works or its disposal field. These solid surfaces prevent access to the system for maintenance, reduce the ability of water to evaporate from the soil, and restrict air movement into the soil.**
- **Do not drive heavy equipment over the components of a waste water treatment system. The equipment can crush them. The components are designed to support the soil over the top of the system, not equipment driving over it.**
- **Natural bacteria are present in the wastewater to decompose the waste. Chemical additives are not necessary for a septic tank to operate. Some additives may even harm the tanks operation. Remember: The septic tank is supposed to collect solids. If you flush solids out of the tanks and into the drain field by adding chemicals, the solids will plug the drain field and you'll have to replace it.**
- **Soaps, detergents, bleaches, drain cleaners and other household cleaning materials very seldom affect the operation of the system. However, use the materials in moderation. Excessive use of cleaning materials or using continuous disinfectants in the toilet bowl or disinfecting soaps and detergents may harm the microbes living in on-site wastewater treatment systems.**
- **If you have a water softener, do not send the back flush water into your on-site wastewater treatment system.**
- **Do not come into contact with the liquid from the on-site wastewater treatment system unless it has been disinfected. Non-disinfected wastewater may contain pathogens that could make you sick. Do not allow electrical service to be interrupted to an on-site wastewater treatment system that has mechanical components or alarms.**
- **Maintain a grass cover over the drain field. Plant warm-season grasses that use much water and overseed with cool-season grasses during the winter. Grasses remove a significant portion of the water from a system and grass cover must be maintained. Trees also remove water and can be planted around the drain field.**
- **Divert away from the land application area any rainwater coming off driveways, other hard surfaces and the roof. The land application area is designed to manage a specific amount of water. Rainwater could fill the system, leaving no room for wastewater. Design landscaping to carry runoff water away from the land application area.**

Gen-Eye Mini-Cam

Locate problems down to the inch-- with the push of a button

Have you ever dug up a flower bed or driveway - only to find the problem elsewhere? Mistakes like those cost time, money and reputation.

And when you find that problem, do you need a shovel or a backhoe?

With the push of a button, the Gen-Eye Digital Locator gives instant locating and depth-finding capability down to the inch. No time-consuming triangulation. Its signal finder detects cast iron pipe to a depth of 10'- and clay and plastic pipes to 20'.

Gen-Eye Digital Locator lets you know exactly where problems are. A broad range of sensitivity settings quickly and easily lets you home in on the transmitter's signal. No guess work involved. The LCD panel produces a clear digital read out, as well as graphic displays and audible tones. All without the inconvenience of imprecise analog meters.

With the Gen-Eye Mini-Cam you can see what you've been missing in 1 1/2' to 6' lines. Inspect vents, laterals, laundry drains and more. Take the lightweight, 28 lb. unit up to the roof and explore 4' lines through the roof vent. Negotiate 3' cast iron P-traps, 2' Plastic P-traps and 1 1/2' 90° bends. The built-in transmitter locates problems at depths up to 20 ft. The open cage reel keeps the push rod clean and odor free, and the compact, portable design makes storage easy.

- **Rugged, stainless steel camera head with 12 ultra-bright LED's (16,000 mcd)-for sharpest pictures without overheating, even in confined spaces.**
- **Compact, lightweight reel holds up 200' of push rod - for easy storage and transport.**
- **Wire rope reinforced push rod - to negotiate 1 1/2' to 6' lines.**
- **Padded, fan cooled carrying case with built-in 9' TV, VCR and sun shield -for maximum protection from shock and abuse.**
- **AC/DC switchable - for flexible field operations from truck power alone.**
- **Digital Locator with push-button depth finder for instant accuracy down to the inch, no triangulation required.**
- **24-48 hour camera service exchange policy- for your convenience.**

Leak Pro = Water Leak Alarm System

LIQUID AND GAS LEAK DETECTOR

Supersonic probe 'hears' leaks below asphalt and concrete. Amplify sounds utilizing our state-of-the-art sensitive listening device. The key feature setting this instrument apart from the others is it possesses the ability to selectively filter out background sounds, making your listening powers much more precise.

So simple to work with, the compact control box is easy to carry - worn on your belt, around you neck or shoulder using the attachable strap.

Three positions of operation; mute, momentary on, locked on, allow for usage in every situation. You'll find its versatility invaluable; optional probes allow detection under the most trying circumstances.

The 'Little Foot' probe is compact for access to tight areas. For sounds beyond the human hearing range, use the Ultrasonic probe for detecting gaseous leaks, leaks purged with air, etc.

About AQUAPEX®

With Wirsbo AQUAPEX® you can turn on the faucet and enjoy the benefits of a safe and reliable plumbing system that's meant to last.

. Clean and Healthy- AQUAPEX® plumbing systems are completely nontoxic. Lead and other harmful substances do not leach into drinking water from the plumbing system.

.Corrosion Resistant- AQUAPEX® tubing does not corrode, even in areas with aggressive water.

. Freeze Resistant- While no tubing is freeze-proof, Wirsbo PEX is the most freeze resistant tubing on the market.

. Quiet- The Wirsbo AQUAPEX® plumbing system operates silently; no pinging pipes or water hammer.

. Reliable Fitting System- Our revolutionary, dependable and proven ProPEX® fitting system forms permanent and leak-resistant connections.

25-Year Warranty- Wirsbo PEX tubing comes with a 25-year warranty when installed by a Wirsbo-trained plumber.

. Proven Product- With over three decades of proven performance and more than 5 billion feet installed worldwide, Wirsbo offers you a tried and tested plumbing system that could last more than 100 years.

. Improved Flow- AQUASAFE results in a greatly improved cold water system with higher flows and pressure to your plumbing needs.

25 - Year Warranty

Our Pledge

Wirsbo Company warrants to the real property owners and succeeding owners that AQUAPEX® tubing and the ProPEX® fittings shall be free from defects in material and workmanship, under normal condition of use, when used for potable water distribution. This Limited warranty shall expire in twenty-five (25) years for AQUAPEX® tubing and ten (10) years for ProPEX® fittings when installed by licensed plumbing contractors recognized by Wirsbo as having successfully completed the Wirsbo AQUAPEX® training course. All warranty periods are measured from the date of installation.
